Contents

Abstract

[1]

1 Introduction

2 Theory

2.1 Standard

$$\beta = \left(\mathbf{X}^T\mathbf{X}\right)^{-1}\mathbf{X}^T\mathbf{y}$$

2.2 Ridge

$$\beta = \left(\mathbf{X}^T\mathbf{X} + \lambda\mathbf{I}\right)^{-1}\mathbf{X}^T\mathbf{y}$$

2.3 Lasso

$$\beta = \operatorname{argmin}_\beta \left\{ \sum_{i=1}^{N}\left(y_i - \beta_0 - \sum_{j=1}^{p} x_{ij}\beta_j\right)^2 + \lambda\sum_{j=1}^{p}|\beta_j|^q \right\}$$

2.4 k-fold and bootstrap

3 Method

4 Result & Discussion

5 Conclusion
